SENIOR FULL STACK ENGINEER | React, TypeScript, Angular, Node.js, component systems

PROFESSIONAL SUMMARY

Senior full-stack engineer with 8+ years of experience building production applications across fintech, banking, insurance, education, and enterprise systems. Brings experience leading frontend architecture, delivering workflows with React, TypeScript, Angular, Node.js, Rust, APIs, and SQL-backed systems, and translating product and operational needs into reliable interfaces, shared component libraries, tested services, and maintainable release practices.

TECHNICAL SKILLS

Frontend: React, TypeScript, Next.js, Angular 17+; AngularJS, Redux, TanStack Query, Storybook, Tailwind CSS, HTML/CSS, Sass, Figma

Backend and APIs: Node.js, Express.js, NestJS, C#, Rust, REST APIs, GraphQL

Data: PostgreSQL, MySQL, Snowflake, SQL query authoring and optimization

AI coding tools: Codex, Claude Code, Claude Design

Testing and delivery: Cypress, Jest, React Testing Library, Jasmine, Cucumber, TDD, AWS (EC2, Lambda), Azure, Docker, GitHub Actions, Azure DevOps, Splunk

PROFESSIONAL EXPERIENCE

OpenYield | Senior Full Stack Developer | May 2025 - Oct 2026 | New York, NY

- Owned frontend architecture, feature delivery, and support across six applications, including a production bond trading platform with real-time pricing. Set frontend implementation standards as part of a four-engineer fintech team.
- Responsible for feature work that contributed to 58% of OpenYield's completed 2026 roadmap deliverables and helped double the number of clients using its GUI trading platform.
- Built React and Next.js workflows for live pricing, search, watchlists, RFQ/RFO, order entry, and bulk order uploads.
- Stabilized live-pricing tables by separating snapshot data from event-stream updates and applying deterministic row-level changes.
- Built event listeners for CTM customer accounts, keyed to the ALERT acronym and account number, and for onboarded users, keyed to Bloomberg ID, so events reached the correct workflow.
- Developed Rust-backed API endpoints and optimized SQL queries for pricing and order-management workflows.
- Built and maintained a reusable component library in Storybook, implemented role-based access control (RBAC), and translated Figma designs into working UI flows.

Atlantic Casualty Insurance | Senior Software Engineer | Jul 2024 - May 2025 | Charlotte, NC

- Delivered frontend and platform features for production insurance quoting and policy-issuance systems using Angular 17, AngularJS, C#, and VB6.
- Introduced Cypress and Jest test coverage in newer applications to improve regression prevention and release reliability.
- Replaced a bespoke branching process with Gitflow and trained developers on the new process. Partnered with management and analysts to improve Jira ticket writing, reducing time spent on tickets by 25% and reducing developer rework.

The Bank of London | Full Stack Developer | Nov 2021 - May 2024 | Charlotte, NC

- Contributed to the corporate website for the company launch and built customer-onboarding workflows using React, Redux, TypeScript, and Tailwind CSS.
- Created the Payments UI and maintained Node.js API endpoints and the Payments microfrontend for UK banking schemes.
- Used TanStack Query for frontend data workflows and built and tested shared React components in Storybook.
- Coordinated with corporate partners to prepare products for launch. Participated in refinements and code reviews and expanded automated test coverage with React Testing Library and Cypress.
- Maintained GitHub Actions CI/CD and participated in biweekly Docker deployments in AWS.

Discovery Education | Full Stack Developer | Aug 2020 - Nov 2021 | Charlotte, NC

- Built Angular and TypeScript interfaces and C# APIs backed by PostgreSQL for a back-office application that tracked employees, laptop assignments, and equipment.
- Helped consolidate disparate data sources in a Snowflake warehouse and align records for reporting and anomaly investigation. This established reliable employee counts and laptop-assignment tracking where that information had previously been unknown or inconsistent.
- Collaborated with senior leaders to define requirements and plan the team's development work. Created and sized user stories, supported junior developers, reviewed code, and implemented Jasmine unit tests for the frontend.
- Deployed the team's completed work to production through Azure DevOps, provisioned Azure resources, and resolved outages.

Vanguard | International and Institutional Systems | Charlotte, NC

Full Stack Developer II | Sep 2019 - Sep 2020

- Collaborated with project owners in an Agile environment to define requirements and implement Angular and TypeScript features using test-driven development.
- Coached entry-level developers on Jasmine, Cucumber, and AngularJS best practices; served as an Angular subject-matter resource during the remote TCS team's Angular 9 upgrade.
- Participated in code reviews, maintained product documentation, and implemented service logging for Splunk using SLF4J and Logback.

Full Stack Developer I | Aug 2018 - Aug 2019

- Built an Angular 7/8/9 application from scratch for a prerelease UK investing product and worked with UK product owners to define technical requirements.
- Created and maintained a reusable component library for investing app releases 0.1 and 0.25. Collaborated with UI designers and provided technical feedback.
- Built and tested Express.js and NestJS services and converted PCF application environments to the enterprise AWS EC2 environment.
- Developed Angular components with Angular CLI and Nx and used Jest, Jest Cucumber, and Cypress for unit, integration, and end-to-end testing.
- Proposed a GraphQL-oriented data-model improvement for version 0.25.

Ally Financial | Systems Engineer (Contract) | Jan 2018 - Sep 2018 | Charlotte, NC

- Worked with Configuration and Asset Discovery teams to improve ServiceNow CMDB accuracy and user adoption through development and user education.
- Integrated external data sources into the CMDB using REST APIs and developed data-quality fixes to remove errors and prevent duplicate records.

Novant Health | Systems Analyst/Programmer Associate | Jul 2016 - Jan 2018 | Indian Land, SC

- Customized the ServiceNow Service Portal for the Jakarta upgrade using AngularJS, JavaScript, HTML, and CSS.
- Built request-form functionality and server-side operations using JavaScript, ServiceNow scripts, MySQL, and Ajax. Supported SOAP/XML integrations and consulted clients to define requirements within the ServiceNow architecture.

EDUCATION

B.A. in Computer Science (Software Engineering), Minor in Technical Writing | UNC Charlotte

CERTIFICATIONS

ServiceNow Certified System Administrator | ITIL Foundations
